

From the above two articles, it can readily be seen that compounds which are effective in treating Alzheimer's disease are not necessarily effective in treating Parkinson's disease. That is, one skilled in the art, i.e., a neurologist, would not look to a drug which has been found to be useful in treating Alzheimer's disease to find a treatment for Parkinson's disease.

In view of the above, it is respectfully submitted that the claims are now in condition for allowance, and favorable action thereon is earnestly solicited.
